Guardian Digital launches new Secure Mail Suite

Allendale, N.J.-based open source security firm Guardian Digital has released its next-generation corporate e-mail system, Secure Mail Suite 3.0. This latest edition has been optimized to support the changing needs of enterprise and small business customers while continually providing protection from the latest in e-mail security threats, the company said.

It is designed to address common resource issues including unlawful resource use due to the perpetual influx of unsolicited junk mail, malicious message content and inappropriate or non-work related e-mails. It's powered by the company's Content and Policy Enforcement (CAPE) Engine and scans all incoming and outgoing transmissions to identify and filter out spam, viruses, malicious code and file attachments, and offensive content. The product is now available starting at \$749.

Interlink Networks unveils one-click Wi-Fi security product

Ann Arbor, Mich.-based wireless security provider Interlink Networks announces the June 25 release of LucidLink Wireless Security. The company describes the product as the first to secure 802.11 wireless local area networks for small businesses. LucidLink Wireless Security's patent-pending technology provides enterprise-level network security and access control, the same high security delivered by an 802.1X RADIUS authentication server without the complex set-up, the company said. It is designed to protect the wireless network from hackers and unauthorized individuals, and simplifies the set-up of wireless access points by automatically selecting the correct options for each device. Pricing starts at \$449 for 10 users.

PGP Corporation announces PGP Desktop 8.1

Cryptography vendor PGP Corp. of Palo Alto, Calif., announced the release of its updated PGP Desktop 8.1 for secure messaging and data storage at the desktop level. PGP Desktop secures desktop data and e-mail with encryption, and provides central administration for easy management and a repository for keys and policies. New features to Desktop 8.1 include international character set, automatic update notification, Novell GroupWise 6.5.0 support, enhanced features Apple Mail application and FIPS 140-2 Validation and a new German language version.

New spam blocker from SystemsLogix

AntiSpam, the spam blocker developed by SystemsLogix of Glendale Heights, Ill., has a new mail server software add-on that provides different ways to block junk e-mail while allowing legitimate messages through. AntiSpam acts similarly to a firewall and is administered by an ISP or corporate IT department. The three-tiered defense blends a filtering program, algorithms and verification from a sender. AntiSpam works with Eudora, Outlook, Outlook Express, Netscape, Entourage, Mail for Mac OSX and any program supporting the POP3 Protocol.

Skybox View upgrade leverages more security features

Palo Alto, Calif.-based Skybox Security Inc., maker of exposure risk management software, this week released Skybox View v1.5. This version is designed with a new open architecture that allows customers to leverage existing security tools used in risk management, including asset management, network management, firewall management and vulnerability scanning through to remediation planning, patch management and trouble ticketing. The software also works with various vulnerability products from security vendors like NCircle, Qualys and BigFix.

Citadel Security Software, iDEFENSE partner

Citadel Security Software Inc., a Dallas-based provider of vulnerability management products, announced a partnership with iDEFENSE, a Reston, Va.-based global security intelligence company. iDEFENSE's advanced warning threat intelligence is being added to Citadel's Hercules automated vulnerability remediation product. This will help Citadel respond to emerging threats and help customers mitigate vulnerabilities before they can pose a threat to the enterprise.
